## **DETAILED ACTION**

### ***Specification***

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: mountings on the side of both frames.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It is not clear as to what the mounting means is in reference to.

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is not clear as to what the "mountings" on one side of the frames is in reference to. In claim 1, it is not clear there is a plurality of inter-dentally extensible

and retractable screws provided in mountings on one side of both frames. The drawings only show one screw in each mounting on each side of the frame (fig. 1).

### ***Claim Objections***

Claims 4-10 and 20-22 are objected to because of the following informalities: In claim 4, there is a lack of antecedent basis for the polarities of the magnetic means. In claim 5, there is a lack of antecedent basis for the magnetic means. In claims 20-21, there is a lack of antecedent basis for magnetic means. In claim 23, there is lack of antecedent basis for bodies of the magnets. Appropriate correction is required.

It is not clear if the applicant intended to cancel the magnetic means from claim 1. Thus, the examiner is making this action a second action non-final in order for all the errors to be corrected. The examiner is not saying that the claims as presented are in condition for allowance.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Strong discloses an antisnoring device that includes a first frame 22, a second frame 24 and retractable screws (30a, 30b).
